

## IN THE CLAIMS

Claim 1 (currently amended):

~~An assembly~~A device for limiting the movement of a first body in relation to a second body, comprising:

a first body, wherein the first body comprises a stop;

a second body, wherein the first body is constrained in movement relative to the second body along a given axis; and

a bendable piece of material,

wherein the piece comprises a first section and a second section contiguous to the first section,

wherein the second section forms a first angle with respect to the first section,

wherein the first angle is measured in a counter-clockwise direction from the first section,

wherein the first angle is at least zero degrees and is less than or equal to 90+35 degrees when the piece is un-deflected, and

wherein at least a portion of the first section is attached attachable to the second body,

wherein when the bendable piece is located in a first position, the second section of the bendable piece is positioned against one side of the stop thereby preventing movement of the first body with respect to the second body in a preselected direction along the given axis,

wherein the piece is moveable to a second position by application of a force to the piece, and

wherein when the piece is located in the second position, the vertex of the first angle is further away from the stop as measured in a direction perpendicular to the given axis than in the first position, the second section is removed from contact with the stop, and the stop is movable freely past the second section in the preselected direction.

Claim 2 (currently amended):

The ~~assembly~~ device as recited in claim 1, wherein the piece is selected from the group consisting of wire, sheet stainless spring steel, a band, and a molded part.

Claims 3-4 (cancelled)

Claim 5 (currently amended):

The assembly device as recited in claim 13, wherein movement of the piece from the first position to the second position occurs in a plane substantially perpendicular to a plane which includes the first angle.

Claim 6 (currently amended):

The assembly device as recited in claim 1, wherein the piece further comprises a third section, wherein the third section is contiguous to the second section, wherein the third section forms a second angle with parallel translation of the first section, wherein vertex of the second angle is located where the second section and the third section are contiguous, wherein the second angle is measured in a counter-clockwise direction from the parallel translation of the first section, and wherein the second angle is at least 190 degrees and is less than 270 degrees when the piece is un-deflected.

Claim 7 (currently amended):

The assembly device as recited in claim 6, wherein movement of the piece from the first position to the second position occurs in a plane substantially perpendicular to a plane which includes the first and second angles.

Claim 8 (currently amended):

The assembly device as recited in claim 6, wherein the piece further comprises a fourth section, wherein the fourth section is separately contiguous to the third section, wherein the fourth section forms a third angle with parallel translation of the first section, wherein vertex of the third angle is located where the third section and the fourth section are contiguous, wherein the third angle is measured in a counter-clockwise direction from the parallel translation of the first section, and wherein the third angle is at least 135 degrees and is less than 225 degrees when the piece is un-deflected.

Claim 9 (withdrawn):

A device for limiting the movement of a first body in relation to a second body, comprising:

a bendable piece, wherein the piece comprises a base and a protrusion connected to the base, wherein the base comprises a first segment and a second segment, and wherein at least a portion of the first segment is attachable to the second body.

Claim 10 (withdrawn):

The device as recited in claim 9, wherein the piece is selected from the group consisting of wire, sheet stainless spring steel, a band, and a molded part.

Claim 11 (withdrawn):

The device as recited in claim 9, wherein the portion of the first segment is attached to the second body, wherein the piece is positioned in a first position relative to the second body, and wherein when the piece is positioned in the first position the

protrusion prevents movement in a preselected direction of the first body past the protrusion.

Claim 12 (withdrawn):

The device as recited in claim 11, wherein a force applied to the second segment positions the piece in a second position relative to the second body and wherein when the piece is positioned in the second position the first body is capable of unrestricted motion past the protrusion in the preselected direction.

Claim 13 (withdrawn):

The device as recited in claim 12, wherein movement of the piece from the first position to the second position occurs in a plane substantially perpendicular to a plane which includes the first segment and the protrusion.

Claim 14 (new):

The assembly as recited in claim 8, wherein movement of the piece from the first position to the second position occurs in a plane substantially perpendicular to a plane which includes the first, second, and third angles.

Claim 15 (new):

The assembly as recited in claim 1, wherein the force is applied to the piece by a tool.

Claim 16 (new):

The assembly as recited in claim 15, further comprising the tool.

Claim 17 (new):

The assembly as recited in claim 1, wherein the force is applied in a plane containing the first angle

Claim 18 (new):

The assembly as recited in claim 1, wherein the first body is a drawer.

Claim 19 (new):

The assembly as recited in claim 1, wherein the second body is a chassis.

Claim 20 (new):

The assembly as recited in claim 1, wherein the second body comprises a hole wherein the hole permits access of the tool to the bendable piece.

Claim 21 (new):

The assembly as recited in claim 1, wherein the force is applied to the second section.

Claim 22 (new):

The assembly as recited in claim 6, wherein the force is applied to the third section.

Claim 23 (new):

The assembly as recited in claim 8, wherein the force is applied to the fourth section.
